

Rapid Prototyping

Through a combination of in house workshop and 3rd party prototyping resources, we can go to stereo lithographic modelling direct from 3D CAD. We are also able to produce anything from rig models to demonstrate mechanical principals, to fully working presentation models that can be used for market research.

Vacuum Cast Silicone Tooling taken from a one off presentation model allows cast replicas to be made, providing the client with as many identical samples as required.

Vacuum cast replica models
